Description

Wiseguyreports.Com Adds “Blood Collection -Market Demand, Growth, Opportunities and Analysis of Top Key Player Forecast To 2022” To Its Research Database

The market is expected to grow at a CAGR of 5.3% from 2016-2021, owing to increasing number of patients with chronic diseases that lead to higher number of surgeries. Rising cases of accidents are also responsible for growth of blood collection market. However, risks of acquiring infections due to unhygienic blood transfusion process and stringent regulatory scenario are expected to dampen market growth during the forecasted period. Implementation of innovative techniques such as RFID in blood transfusion and storage processes present great opportunities for the market to grow during the forecasted period.

North America dominates the market due to increasing incidences of contagious diseases and lifestyle induced diseases. Sophisticated healthcare infrastructure and rapid adoption of advanced technologies are some of the major factors fuelling market growth in this region. However, APAC is expected to be the fastest growing market owing to increasing rate of disease prevalence that leads to rise in blood inventory management. Economic development of countries such as China, India, Japan and South Korea also contribute in rising healthcare expenditure, thus boosting the market.
