Food Fortification

The lead analyst of the report said: <insert quote from analyst> e.g. “The food fortification ingredients market is about to enter into a high growth trajectory resulting in phenomenal growth and innovation. The next ten years will see the large-scale manufacturing and distribution of food fortifying ingredients alone with different new applications for ingredients such as Vitamins, Lipids and Iron etc. A range of new R&D projects and innovations for identifying micronutrients and introducing these into the food chain could become game-changers subject to successful commercialisation. While vitamins and minerals will continue their dominance when it comes to food fortifying ingredients, its share in volume terms in many developed countries will start to level off due to an increasing maturity of the market for these ingredients and focus on new ingredients. Other ingredients submarkets will more than make up for this shortfall, however. The increasing penetration of food fortification ingredients into different types of foods and attempts to discover new applications and ingredients will all drive the food fortification ingredients market on a global scale.

The 179 page report contains 167 tables, charts and graphs containing over 3,000 market data

points that illustrate the developing trends within the Food Fortification Ingredients market in volume (KT) and market value (\$m) terms.

The key player provides these value and volume forecasts for the period 2017-2027 for the 19 leading Food Fortification Ingredients Market submarkets, namely the Ingredients (Minerals, Vitamins, Probiotics, Prebiotics, Carbohydrates, Other (Proteins & Amino Acids) and by application (Dairy, Confectionary, Prepared Foods, Cereal & Cereal Products, Dietary Supplements, Infant Nutrition, Animal Nutrition, Other (Fats & Oils etc.)
