Infotree Launches Crowd Testing Platform ClicSource to Provide Testing Services Starting at 300$

DALLAS, LONDON, UNITED STATES, UNITED KINGDOM, July 27, 2017 /EINPresswire.com/ -- Infotree Solutions, an eminent name in the U.K with over a decade existence offering cutting-edge IT solutions and services, today announced the launch of its crowd testing platform – ClicSource. This platform enables Innovators, Startups to deliver thoroughly tested applications, by purchasing testing packages online starting at 300$.

ClicSource is a cloud testing platform based on Crowdsourcing to increase Business Productivity. The best advantage of Crowdsourcing is that the work is done by a large crowd which enhances the chances of getting the work done more quickly and efficiently. ClicSource is a best-fit software testing solution for client companies since it enables client companies to get their applications tested by a large pool of experienced and talented Testing professionals without worrying much about the huge investments in testing environment and resources.

Speaking on the Occasion, Venkatesh Akula, CEO at Infotree said, "We are excited to have launched the ClicSource platform that enables organizations building apps and websites quickly and test them cost-effectively. We are bringing Automation Testing into crowdsourced testing and this is what gives the edge to be on the curve compared to other competitors. Speed and Quality are the benefits of Test Automation and we are blending it with the benefits of Crowd Testing; thus our client can avail both benefits at one stop. With ClicSource startups, who cannot afford Test Automation Engineers can leverage the crowd to create and review automation test scripts, and for execution – we are supporting them with our test execution platform. At ClicSource, we are building a vetted community which means a verified pool of crowd testers from across the globe with a reliable skill set matrix on different types of testing and diverse testing tools. We provide them the private cloud based infrastructure with right test environment and tools for them to focus on testing."

Addressing on the launch, Pavan Kumar, Vice President – Technology said, "With the rapid increase in the launch of a wide range of software applications, quality attributes like functionality, performance, and security for the applications have become extremely important and organizations are competing with one another in providing products and services with these qualities. ClicSource is a one-stop-Crowdsource testing solution which gives organizations tremendous scope for improving their most valuable software product/application within an incredibly short time-span. ClicSource is affordable crowd source platform designed to help especially the startup's and SME companies."

We welcome crowd testers with experience in open source testing technologies to be part of our global testers' pool by applying at https://clicsource.com/contact-us/. Enterprises, Startups &

Innovators looking to test their web apps or mobile apps with experts in few hours in real time can approach us at https://clicsource.com/contact-us/. For more information on ClicSource, please visit https://clicsource.com/
