

Orphan drug market has potential to grow at a CAGR of 9.2 % by 2022

orphan drugs market Information, pharmacological class (Protein & Enzyme Replacement,), By Applications, By technology and by BY source - Forecast Till 2022

PUNE, MAHARASHTRA, INDIA, August 8, 2017 /EINPresswire.com/ -- Market Highlights:

Major Key Players are Hoffmann- La Roche, Celgene Corporation, Alexion Pharmaceuticals, Inc., Novartis AG, Takeda Pharmaceuticals Company Limited, Biogen Idec Limited, Eli Lilly,

”

Market Research Future

[Global Orphan drug market](#) is expected to grow at a CAGR of 9.2 % during the period 2016 to 2022. Orphan drugs are used for the treatment of rare diseases and disorders that affects a small percentage of the population.

The orphan drug market is characterized by huge price margin which guarantees an excellent rate of return. Severe lack of effective substitute and the inelastic nature of demand lead to dominance of the supplier.

This coupled with government incentives for orphan drugs make it a high risk and high return market. The orphan drug market favors companies with expertise and a strong research and development pipeline. Thus the strategy of most companies revolves around more for more and

nothing for less. The market is also extremely sensitive to technological disruptions and is highly volatile as only a few drugs dominate the market. Thus the market is extremely unitary with only a small number of companies. The uptake of the drug product is quicker and there is considerable first mover advantage. The limited number and the limited buying power of patients especially in developing nations are important factors constraining the market. Volatility and over dependence on a few drugs are risks faced by companies.
