Market Research Future

As the name suggests “Baby Food & infant Formula” is all about infant’s dietary food items to be consumed or eaten for meals or breakfasts. In today’s hustle bustle of life with growing number of working mothers; Baby food is proving to be a boon and due to its convenience it has taken the place of conventional & traditional food items. It’s not only about the convenience; sometimes mothers may be unable to breastfeed for a multiple reasons –May it be physical or physiological; baby food & infant formula seem to be great option. Baby Food and Infant Formula is accounted to witness

a relieving growth by 2027, in terms of value and volume with a substantial CAGR; surpassing its previous growth records by the end of the forecasted period (2016 – 2027).

The increasing number of parents is determined to provide optimal nutrition to their infants. They opt for packaged baby foods and infant formulas to supplement breastfeeding. This coupled with the increased concern of parents for the health, and nutritional requirements of their babies have significantly contributed to the increase in demand for baby food and infant formula over the last few years. Further the Research Analyst adds, one of the primary drivers for this market is the increasing health concerns among parents. The Sector - organic baby foods is the fastest growing sector reason being safer and nutritionally superior to conventional baby food.
