

Corrosive Battery Acid? Save Battery Drip Pans / Enclosures

Neutralize and solidify battery acid boil over drips and spills preventing corrosion of expensive drip pans or enclosures around the batteries.

ST. LOUIS, MO, USA, September 6, 2017 /EINPresswire.com/ -- Save drip pans, battery racks and enclosures with [AcidSafe Neutralizing Sorbent Socks & Pillows](#). As boil overs and drips occur during recharging and use, these thirsty socks & pillows soak up the battery acid and neutralize it. This protects expensive drip trays and enclosures from damaging corrosion. AcidSafe, Neutralizing sorbent socks and pillows solidify & neutralize battery acid. They provide a color change indication of the PH as it is neutralized.

This neutralizing pillow concept eliminates and replaces the commonly used poly rugs and/or loose messy clay sorbents that do not neutralize or protect your drip pans very well. When a boil over occurs, normally it is just in one area. With this in mind, WYK designed AcidSafe Socks and Pillows for quick change-outs; the 12" X 12" pillow size allows you to change out only one or two pillows at a time under the battery or cell that has boiled over.

AcidSafe Neutralizing Socks

AcidSafe Neutralizing Pillow

The neutralizing sorbent inside the socks and pillows also provide a color change indication when the acid has been neutralized. Once a purple color returns, the pillow is neutral and safe to handle and dispose of.

The AcidSafe neutralizing socks and pillows work great on spills and drips that occur when filling and cleaning batteries, making cleanup quick, safe and easy!

Acid Safe Socks are 4" X 48". Pillows are available in 12" X 12" and in 24" X 24" sizes. All AcidSafe neutralizing socks and pillows are packed 8 per case.
