## [Fiber Laser Market 2017](#)

### Executive Summary

Fiber lasers contain the active gain medium, which is an optical fiber integrated with rare-earth elements such as erbium and ytterbium. In a fiber laser, a part of the fiber is used as the resonating cavity. The laser action takes place in this cavity, and laser beams are generated. Fiber lasers are preferred over other lasers such as CO<sub>2</sub> lasers. This is because they are more reliable, efficient, robust, portable, and easier to operate than the other lasers.

The analysts forecast the global fiber laser market to grow at a CAGR of 11.69% during the period 2017-2021.
