

The Importance of Process Development, Scale-up & Technology Transfer

ISELIN, NEW JERSEY, UNITED STATES, August 21, 2017 /EINPresswire.com/ -- [Lyophilization](#) is an important method for producing stable drug products that otherwise would not be stable under common storage conditions, and thus expands opportunities for the development of life-saving medicines.

When a product is developed in the laboratory setting or using small-scale equipment, such expertise is particularly valuable during technology transfer and scale-up of lyophilization processes. While these operations generally run smoothly, there are times when conditions in the laboratory-scale setting cannot be duplicated at commercial scale; production, formulation, container, or equipment-related problems arise. * The processes of Lyophilization can go wrong, especially those in larger scales, which cannot be mimicked easily.

“

I enjoyed the conference and would love to come again... a better opportunity for networking”

Baxton

A key topic not to miss at Lyophilization USA is Lyophilization Process Development, Scale-up & Technology Transfer Strategies, which discovers the traditional approaches for process design, scale-up and tech transfer, the impact of lyophilizer design and challenges that can occur when implementing plans for large scale lyophilization.

This will be presented by Charlie Tang, Director, Formulation Development, Regeneron Pharmaceuticals.
