[Marine Air Conditioning Systems SWOT Analysis And Forecast 2021](#)

## About Marine Air Conditioning Systems

The principle behind air conditioning is the movement of heat. An air conditioner pulls the heat from the air by transferring the heat in the cabin to the refrigerant gas within the air conditioner. A marine air conditioner then transfers the heat from the refrigerant gas to the sea water. The process can also be reversed, the air conditioner can pull heat from the sea water and transfer that heat to the cabin. This is called reverse cycle air conditioning.

Technavio's analysts forecast the global marine air conditioning systems market to grow at a CAGR of 6.72% during the period 2017-2021.
