PUNE, INDIA, August 31, 2017 /EINPresswire.com/ -- Pune, India, 31st August 2017: WiseGuyReports announced addition of new report, titled "PharmaPoint: [Venous Thromboembolism](#) - Global Drug Forecast and Market Analysis to 2026". □

Summary

Venous thromboembolism (VTE) is a disease that includes a myriad of life-threatening disorders ranging from pulmonary embolism (PE) to deep vein thrombosis (DVT). The condition is relatively prevalent and is associated with long-term mortality and morbidity. VTE occurs when a thrombus (blood clot) forms in an individual's deep vein, owing to either changes in the components of their blood, damage to the endothelium in the vasculature, and/or changes in the flow of blood). When a thrombus materializes in the veins of the lower extremities, it can embolize, potentially occluding blood vessels in the lungs. Consequently, the vast majority of patients presenting with symptomatic pulmonary embolism also suffer from deep vein thrombosis, and many individuals diagnosed with deep vein thrombosis display pulmonary embolism that is asymptomatic. VTE can arise in both non-hospitalized and hospitalized individuals, repeatedly returns, and can cause chronic complications, such as post-thrombotic syndrome (PTS) or chronic thromboembolic pulmonary hypertension (CTEPH).
