

Apogee Voyager online bus ticketing system

The system has been successfully installed on regional bus services and travel agents

THESSALONIKI, GREECE, August 31, 2017 /EINPresswire.com/ -- [Apogee Voyager](#) is an integrated online ticketing system that serves the purposes of travel agencies or individual travel agents, especially those with their own land routes. The system allows its users to efficiently manage their services, while giving them the opportunity to book their tickets electronically and to manage their booking information.

The design of the system guarantees the direct control and supervision of the various processes by the user or company. Among the offered features of Apogee Voyager are seat reservation and cancelation, routes planning, booking reports, passengers list and SMS reminders.

“

Voyager is implemented based on the multipurpose platform Apogee Essence CMS, a successful information management tool used by EU organizations and companies”

Nektar Baziotis, Apogee Information Systems

Voyager has been operating successfully for the past 4 years. During this period, it has served more than 300,000 passengers on over 17,000 daily routes. It has been installed and operates successfully on regional bus services in Greece, including the Terminals of Macedonia, Magnesia and Kilkis as well as Albatrans in Albania.

Voyager advantages:

- *Easily adapted to an existing website or be integrated into a new one
- *Fully functional online system that does not require any additional equipment
- *Unlimited number of routes, agencies, and users

*Multiple level users with different rights if needed

*Full usage rights and management without any additional costs or commissions of a travel agent's tickets

*Customizable to specific business needs

“Voyager is implemented based on the multipurpose platform [Apogee Essence CMS](#), a successful information management tool used by EU organizations and companies” said Nektar Baziotis, Managing Director of Apogee. “Essence CMS enables the automation of data entry and updating, thus facilitating the process of searching and viewing the desired information. As a result, both the level of customer service and the efficiency of users are improved.”
