PUNE, INDIA, September 1, 2017
/EINPresswire.com/ -- [Biotechnology services Market](#):

Executive Summary

Organ-on-a-chip via 3D printing considerably reduces costs in the initial stage of product development in the biotechnology research. It involves microfabrication of living tissues within microscale fluid channels to make an exact microscale copy of human organs and this process is aided through 3D printing. It encompasses mesoscale technologies like cell-laden hydrogels and 3D printing, and microscale technologies like laser assisted bio-printing and addresses major limitations of a previously popular top down tissue engineering method.
