

Mining Rigs from Hminers Offering Up to 650 TH/s Hash Power for Bitcoin Mining

MIAMI, FL, USA, September 6, 2017 /EINPresswire.com/ -- Hminers (www.hminers.com) looks all set to script an unprecedented success story in the worldwide industry for cryptocurrencies. The company's three mining rigs are quickly emerging as the most preferred option amongst thousands of bitcoin miners around the world. The most extraordinary feature of these mining rigs is their ability to deliver extremely high hash power, while keeping the power consumption under reasonable limits. These multi-algorithm mining rigs can be used to mine Bitcoin (hash power of up to 650 TH/s), Litecoin (hash power of up to 22.5 GH/s), Ethereum (hash power of up to 15 GH/s), and Dash (hash power of up to 50 GH/s).

Though the concept of cryptocurrency is now understood by many people around the world, the term cryptocurrency mining still remains to be relatively unknown. As far as the income perspective of cryptocurrency mining is concerned, hash rates are of prime importance. Functionally speaking, this is a measure of the power of the miner's hardware and reflects the hash function computation frequency per second. The performance of the miners is measured in MH/s (Mega hash per second), GH/s (Giga hash per second), and TH/s (Terra hash per second).

Hminers is a team of industry experts that hit the headlines in the past by designing and creating the world's first 10 nm ASIC Chip. Their three mining rigs H2U Miner, H4U Miner, and Rack Equipped with 5 x H4U were designed to ensure higher profitability for the users. This goal has been accomplished by maximizing the hash rate and minimizing the power consumption to a level that hasn't been achieved so far. Unlike any other similar product available on the market, Hminers has made it possible to mine multiple algorithms such as SHA-256, Scrypt, Etehash, and X11.

Some key features of the Bitcoin, Litecoin, and Ethereum miners from Hminers include:

Hash rate of up to 650 TH/s, 22.5 GH/s, 15 GH/s and 50 GH/s for Bitcoin, Litecoin, Ethereum and Dash, respectively.

Low power consumption, operating temperature, and noise

Guaranteed return on investment within a month

User-friendly with pre-installed software

Built and Designed to operate under multiple algorithm

Highlighting the superior qualities of these mining rigs, the CTO of Hminers, Benjamin Berglung stated, "Some of the biggest products available on the market offer 13TH with a power consumption of 1300W. We are offering much higher hash rates with the same power consumption."
