

# First Ethereum ASIC Miners Released by Hminers

MIAMI, FL, USA, September 7, 2017 /EINPresswire.com/ -- HMiners (<https://hminers.com>) is now making a strong impact in the global cryptocurrency market with their three powerful mining rigs that have already proven their efficiency in Bitcoin, Litecoin, Dash, and Ethereum mining. The company claims that these are the first ever mining rigs that can run on SHA-256, Scrypt, Etehash, and X11 mining algorithms. Using the H2U Miner, H4U Miner, and Rack Equipped with 5 x H4U from the company, many users have already been able to receive a 100% return on their investment within just one month.

In the language of technology, an algorithm is defined as a self-contained sequence of actions capable of carrying out data processing, calculation and automated reasoning tasks. SHA-256 stands for Secure Hash Algorithm, and is the most commonly used algorithm for Bitcoin mining. Scrypt is a multi-layered algorithm that is faster compared to SHA-256 because of its capability to set the hash size to a smaller number, and is used extensively for Litecoin mining. X11 is a relatively new algorithm known for its extraordinary energy-efficiency while mining with a CPU or GPU. The most advanced of all, Ethash is the Proof of Work hashing algorithm for Ethereum mining.

Though the field of cryptocurrency has experienced significant developments over the years, not much has been done so far in terms developing mining rigs capable of mining Ethereum. The team at HMiners has spent months in evaluating, prototyping, and extreme-condition pressure testing their three miners before starting their mass production. The most noteworthy feature of these products is their ability to mine Ethereum with extremely high hash rates, while maintaining low power consumption. Many Ethereum miners around the world are now using these mining rigs with great satisfaction.

The benefits of using HMiners mining rigs are:

Extraordinary hash power of up to 650 TH/s for Bitcoin, 22.5 GH/s for Litecoin, 15 GH/s for Ethereum and 50 GH/s for Dash

Low power consumption of 1200W, 1800W and 1800W x 5 for the three products

Operating Temperature of 0°C to 40°C

Less than 30 dB noise

Two year warranty on all products

Allows users to switch to any coin that offers better profitability

Guaranteed return on investment in less than a month

Discussing the uniqueness of these three mining rigs, the CTO of HMiners, Benjamin Berglung stated, "These are the first ever mining rigs that can run four algorithms, especially Etehash, which is certainly unique because no miner available on the market can be used for mining Ethereum. In fact, our miners can mine any coin that uses SHA-256, Scrypt, Etehash, or X11 algorithms."
