Assembly Automation Market Research Report 2017

Automated assembly refers to a manner of producing goods by use of automated machinery or assembly robots and a systematic approach to assembling goods that operates at least partly independently from human control. In most cases, automated machinery is used to produce products using standardized parts added in a specific series of motions or activities along what is commonly called an assembly line. In many technology firms, medical research and clinical companies and factories, automated assembly is an important part of the process.
