

Wind Power Business of India Market Analysis 2017 (By Segment, Key Players and Applications) and Forecasts To 2022

Wind Power Business of India Market Research Report 2017 Analysis and Forecast to 2022

PUNE, INDIA, September 8, 2017 /EINPresswire.com/ -- Pune, India, 8th September 2017: WiseGuyReports announced addition of new report, titled "Opportunities in Open Access Transactions and Short Term PPAs in [Wind Power Business of India](#)".

In recent step, regulatory commission allowed distribution utilities to renegotiate the long term PPAs to a lower degree of tariffs which is determined by reverse auction of the wind power tariffs. In recently held auction, sharp decline in the tariff of wind power was witnessed. The tariff fell close to INR 1-1.5 per Unit and reached a level of INR 3.46 per Unit, which is significantly lower than Feed in Tariffs of some states. It is also anticipated that wind power generators may further bid aggressively taking the tariff to sub INR 3 levels. These tariff levels will have the direct impact on the existing plants. Further, owing to such lower tariffs, distribution utilities can put a pressure on to generators to renegotiate PPAs or simply dishonour them. This issue is critical and long term PPAs can come under jeopardy, hence, the opportunity for the wind power developers lie in signing short term PPAs and selling power directly to the consumers through Open Access route.
