WiseGuyReports.com adds "Cutaneous T-Cell Lymphoma Market 2017 Global Analysis, Growth, Trends Research Report Forecasting to 2025" reports to its database.

PUNE, INDIA, September 11, 2017
/EINPresswire.com/ -- [Cutaneous T-Cell Lymphoma Market:](#)

Executive Summary

Cutaneous T-Cell Lymphoma market size in 7MM's is estimated to increase at a CAGR of 1.6% for the period (2013-2025), as per the latest report. CTCL is a group of lympho proliferative disorders characterized by localization of neoplastic T lymphocytes to the skin. Collectively, CTCL is classified as a type of non-Hodgkin lymphoma (NHL). It is the most common type of skin lymphoma. Out of every 4 skin lymphomas diagnosed, more than 3 are CTCLs. They often appear as eczema-like skin rashes and can affect widespread parts of the body. The most common types of CTCL are mycosis fungoides and Sezary syndrome.

According to report, "Cutaneous T-Cell Lymphoma- Competitive Landscape, Market Insights, Epidemiology and Market Forecast-2025", US accounts for the highest incident population as well as annual cost of therapy of CTCL compared to EU5 (Germany, France, Spain, Italy and UK) and Japan. Out of the two sub-types, the incident rate of mycosis fungoides has been increasing significantly since 1970s. There were about 1703 cases of mycosis fungoides estimated in United States in 2013, Which is estimated to increase at a much higher rate.

As per the latest report, it is estimated that the incident cases of CTCL in US shall increase at a CAGR of 0.35%, fueling the market size of CTCL in US which is expected to increase at a CAGR of 1.4% during the period (2013-2025). Many companies are developing drugs for this indication wherein Soligenix, Seattle Genetics, Eisai are leading the market with their products in phase III of development. According to the estimated market size of early stage and late stage CTCL, early stage Cutaneous T-Cell Lymphoma market size is expected to have a CAGR twice as high as that of the late stage one.
