

Dr. Sandhu of GKS Family Dentistry Introduces Invisalign, the Invisible Braces

GKS Family Dentistry wants Roseville, CA residents to experience the Invisalign experience by providing premium, trustworthy, and professional service.

ROSEVILLE, CALIFORNIA, UNITED STATES, September 26, 2017 /EINPresswire.com/ -- Dr Sandhu of [GKS Family Dentistry](#) Introduces Invisalign, the Invisible Braces

Patients in Roseville can get a beautiful smile with an advanced dental technology for straightening misaligned teeth.

Roseville, CA, 18 September 2017 - Today, GKS Family Dentistry, serving patients in Roseville and the local area, announced the introduction of a new treatment for misaligned and incorrectly positioned teeth - Invisalign, which is known for being the modern alternative to traditional braces. The treatment will be provided by Dr Gurkamal Sandhu, DDS, an award-winning specialist with extensive expertise and experience.

Crowded and crooked teeth as well as gaps between teeth are not only aesthetic problems but can also affect the self-confidence of people and consequently their personal and professional life. Metal braces are the traditional treatment for the misalignment of teeth, formally known as malocclusion, and while they are effective, they are not aesthetically appealing and may be difficult to clean and to maintain.

Invisalign is an innovative orthodontic correction based on clear plastic trays which are worn over the teeth to position them gently over time by applying the required amount of pressure on the correct points. It is suitable

for patients of various ages who want to have a gorgeous smile.

Talking about the introduction of Invisalign at GKS Family Dentistry, Dr Sandhu said, “Popularly known as invisible braces, the clear aligners made of surgical-grade plastic, are designed to work effectively while being comfortable to wear. Most patients requiring teeth alignment choose Invisalign primarily because of aesthetics - they want their teeth to look as natural as possible every day and I recognize how important this is at school and at work. For me, as a dentist, the primary advantage is that the plastic trays can be removed, enabling patients to clean both the trays and their teeth and gums in the right way.”

About Invisalign

The treatment for teeth misalignment starts with Dr Sandhu using state-of-the-art technology to create impressions of the patient's teeth and gums. The impressions are used for the making of the clear plastic aligners at a specialized dental laboratory that has been carefully selected. The laboratory produces a set of trays to be worn throughout the treatment, with the patient having to switch to a new tray every couple of weeks as progress is made.

Dr Sandhu ensures that the clear aligners fit properly and are comfortable to wear and provides full advice on the daily cleaning routine and all other important matters to the patient personally. Several checkups are typically required over the course of the treatment, primarily for progress monitoring. There is no need for the regulation of the Invisalign aligners as is often the case with traditional braces.
