About Biodiesel

Biodiesel is an alternative fuel for automotive engines, which is produced by the chemical reaction of a raw material, such as vegetable oil or animal fat, with an alcohol such as methanol or ethanol. Biodiesel is a better alternative for the environment as it is produced from renewable resources, and it releases low emissions compared with normal diesel. As it is produced domestically from natural resources, its use decreases the dependency on imported fuel, and it also contributes to a country's economy.

Technavio's analysts forecast the global biodiesel market to grow at a CAGR of 4.57% during the period 2017-2021.
