[Spine Surgery Market 2017](#)

Spine surgery helps to restore functions of the spine from spinal disorders that include spine deformities, disc herniation, spondylolisthesis, scoliosis, degenerative discs, trauma, spinal stenosis, and tumors in spine region. Traditional open surgeries and minimally invasive surgeries are helpful for the treatment of spinal disorders. These surgeries involve the usage of various devices and supporting tools for the spine as treatment. The devices used for corrective spine surgery are made of metals such as stainless steel, bioabsorbable materials, polymers, titanium and its alloys, and biomaterials, and are designed in different sizes and shapes for all age groups, and as per end-user requirements.

The analysts forecast the global spine surgery market to grow at a CAGR of 5.49% during 2014-2019.
