TraceGains Expands Quality Management Product Suite

TraceGains releases new Quality Management Standard solution to address industry demands for food safety plan and audit documentation and training records

DENVER, COLORADO, UNITED STATES, September 21, 2017 /EINPresswire.com/ -- TraceGains, the leading compliance software solution, revolutionizing information exchange across the supply chain for Food, Beverage, and CPG companies has expanded its product suite to include Quality Management (QM) - Standard, which opens the door for many small and mid-size companies to automate and digitize their documents and processes via TraceGains' proven solution.

Quality Management - Standard provides a centralized repository for critical food safety plan documentation, workflows, standard operating procedures (SOPs), and other required documents needed for both internal and external audits.

TraceGains has preloaded document frameworks for common audit schemes like BRC, SQF, and FSMA to help guide customers through the requirements. Now, Food and Beverage companies, of any size, will have access to the same drag and drop technology to manage their food safety documentation just like the world's largest manufactures do today using TraceGains.

Training checklists are automated by employee, job function, and/or department and offer automatic notification of corrective action requests when an employee is non-compliant. When it comes to training documentation, TraceGains now answers the "Who, What, Where, When", with stunning clarity and ease of use.

"TraceGains prides itself in being nimble and forward-thinking to address the needs of the industry. We heard loud and clear that the industry was calling for a standard QM solution that addresses documentation and training needs, specifically, so we delivered just that," commented Gary Nowacki, CEO, TraceGains. "We have expanded our Quality Management menu to include both standard and enterprise versions, which helps us ensure we are offering the right product for each client's unique needs."
