About Gas Meter

A gas meter is an instrument that is used to measure the consumption of gas in terms of volume in residential, commercial, and industrial premises. Gas meters can be broadly classified into the following: analog type basic gas meters and digital type smart gas meters. Analog type basic gas meters measure the volume of gas consumed and incorporate a meter reader to record the measured data. Digital type smart meters, on the contrary, make use of wireless communication technology and transmit all the necessary data at the utility end. Smart meters give accurate readings and measurement and hence, remove any discrepancies while billing.

Technavio's analysts forecast the global gas meter market to grow at a CAGR of 14.21% during the period 2017-2021.
