[Hydraulic Pumps Market 2017](#)

A hydraulic pump is a mechanical device that converts mechanical energy into hydraulic energy or hydrostatic energy. It operates on displacement principle. A vacuum is created at the pump outlet, when the pump operates, that induces a force, which drives a liquid from the reservoir into the inlet line. With the aid of further mechanical action, the liquid gets transferred to the outlet and eventually into the hydraulic system. This system is used in hydraulic drive systems, which can either be hydrostatic or hydrodynamic. A hydraulic machine, together with a pump, performs various tasks such as lift, lower, close, open, or rotate components. It is the source of power for various dynamic machines and equipment.

There are various types of hydraulic pumps:

- Gear pumps
- Vane pumps
- Piston pumps

The analysts forecast the Global Hydraulic Pump market to grow at a CAGR of 5.07 percent over the period 2015-2019.
