Apart from game building and team analysis, the RTLS also help to keep track of players at a personal level such the distances they run each day, speed development and various other fitness activities. Right now the RTLS is carried out in indoor activity due to low range and new technology is still developing.

Even though many industries currently rely on cellular networks and satellite asset tracking, limited signal strength can be difficult to find in home environment. This will increase demand for low cost RFID tags for asset tracking.

Apart from that, RFID transponders is already available in the market. This will enable RTLS based devices to measure distance travel, speed, and other fitness tasks, so that their dependency in asset tracking will increase.
