## [Film Capacitor Market 2017](#)

A film capacitor is a device that uses a thin plastic or paper film as the dielectric between the two metallic electrodes. The plastic film is drawn into a thin thickness on which the electrodes are placed. The entire assembly is then placed into a casing, which protects it from the external environment. Since capacitors are low-cost devices, plastic or paper is used as the dielectric. For further cost reduction, cheaper plastics can be used.

The analysts forecast the global film capacitor market to decline at a CAGR of (1.43%) during the period 2017-2021.
