

On the Rise Foot Health Issues for Women Find Solution in This New Innovative Technology

UKIES Shoes has reinvented shoes for the modern woman. Using modern materials in a line of shoes made with their patented nanoGel technology.

ATLANTA, GEORGIA, USA, September 27, 2017 /EINPresswire.com/ -- Growing foot pain, knee pain and back pain are just the common complaints in a growing number of women in more affluent countries across the globe. Using modern materials and having developed a dual layer technology to provide full support in stylish shoes is a feat [UKIES Shoes](#) has achieved in a short span of two years, that being the time taken in research and development of the [UKIES nanoGel](#) technology now built into every UKIES Shoe. Women can finally have true comfort and style in their shoes.

[Rave reviews](#) from women who have come back to buy their second and third pairs and some on their fourteenth shoes from the brand swear by the comfort. One woman even wrote she instinctively finds herself reaching for her UKIES pumps every morning because they feel Oh So Good!

Podiatrist Dr Jennifer Price says, " As a podiatric physician, one of the most common complaints I hear from women is pain in the ball of the foot and toes. Many of these women are working professionals who need to be well dressed from head to toe on a daily basis. Unfortunately most high heel shoes lack the proper support, cushioning and design needed for all day comfort. This can result in conditions such as painful corns and calluses, hammertoes and neuromas.

Finding a shoe that embodies both style and comfort can be challenging. Now there is finally a shoe that can deliver. UKIES are designed to help keep women on their feet all day long. The exclusive nanoGel™ technology built into their women's high heel shoes provides more than ample cushioning and toe room while also keeping feet securely in place. After wearing UKIES, I was surprised that such a fashionable shoe could provide so much comfort. I would highly recommend these shoes to any woman who wants to look and feel great all day long. "

A comparison of the UKIES nanoGel insole to a ordinary cushion or foam insole shows significant reduction in peak pressure in the key areas of the foot. Two test subject wore the UKIES pump and a pump with ordinary foam from a leading brand. Study was conducted in a controlled environment lab at a leading University under the supervision of a foot and ankle specialist. All tests verified at the time of this press release.

Major retailer Nordstroms was the first to get an exclusive debuting the shoes for their online buyers. UKIES Shoes is excited to add Lord & Taylor this Fall and is in talk with Dillards to make this technology available to more women shoppers.

What started with just two styles has now evolved into a bigger offering from Ballerinas to Loafers to the Low and Higher stilleto heels keeping in mind the different occasions in a woman's life. Sneaker shoes for the weekend, ballerinas to run errands in and mid sized heels and sandals for every occasion. UKIES Shoes say they get asked a lot to go even higher in heels by their customers and understandably so for women who feel the pain in their high heels. The company is yet to launch any four inch heels before full research into health hazards of tilting the foot at those very high angles they said. Even so to feel supported in our shoes is the dream we all dream.

More women are participating in the workforce and to look sharp and to feel confident, are habitually given to sacrificing comfort for style. Kavita Khaitan the co-Founder of UKIES wanted to do something about this. She tapped into her husband Umesh K Khaitan for his engineering and manufacturing background to come up with the innovative UKIES nanoGel technology.

Every modern woman insists on more and better choices, technology is improving every aspect of our lives so it was only a matter of time till someone came along with the next generation of shoes, forever changing how shoes will be made for all of us.
