[Commercial Aircraft Seating Market 2017](#)

Airline seats are usually arranged in rows and separated by aisle(s) running along the length of aircraft's fuselage, and the diagram that demonstrates the seating arrangement in an aircraft is known as aircraft seat map. Airlines have dissimilar seat maps for similar type of aircraft, which are purely based on the routes and the targeted passenger segment. They also aim to make the seats flexible and comfortable for their passengers. Therefore, they equip the seats with a reclining mechanism, which is usually operated mechanically in the economy and short-haul business class and electrically operated in long-haul business and first class.

The analysts forecast the global commercial aircraft seating market to grow at a CAGR of 7.81% during the period 2017-2021.
