About Container Weighing System

Container weighing systems perfectly integrate the container load monitoring methodology and current container handling equipment to deliver accurate weight verification data as a part of their regular lift cycle within the terminals and the ports. Container weighing systems are being specifically developed to meet the International Maritime Organization's amendments to Safety of Life at Sea (SOLAS) safety guidelines. SOLAS delivers accurate weight verified data on the real-time basis, as a component of the port's regular container lifting cycle through rubber tire gantry or rail mount gantry.

Technavio's analysts forecast the global container weighing system market to grow at a CAGR of 6.20% during the period 2017-2021.
