About Enteral Stents

Enteral stents are used to maintain the lumen of hollow vessels, organs, and ducts. A broad range of stents are available in the market for inserting in the GI tract in case of gastrointestinal stricture, colonic malignant obstruction, esophageal malignancy, and malignant or benign bile duct. Enteral stents help to open up passage for bodily fluids and other content such as food or to hold the channels open during surgery. These devices are made of artificially-engineered material for in-body placement that rarely causes serious health problem to the patient.

Technavio's analysts forecast the global enteral stents market to grow at a CAGR of 3.78% during the period 2017-2021.
