BASEL, , BASEL, SWITZERLAND,
October 8, 2017 /EINPresswire.com/ --

[Andreas Fink](#), CEO of Datacell and [Cajutel](#) who is heavily involved in telecommunications in Iceland, Guinea-Bissau, Guinea, and Switzerland. Being in the telecom industry from past 25 years after serving multiple regions with mobile internet GSM to 4G, He has Launched Cajutel to digitally revolutionize West Africa with a reliable, High-speed affordable internet.

“

This is a pretty unique situation to touch such a virgin market and gives us the opportunity to grab the market completely to create a big boost to the education and economy.”

Andreas

Cajutel is a Guinea-Bissau based telecom company under Swiss ownership with the vision of providing high-speed internet to every rural and remote area of the country. The area where people don't even have basic means of telecommunication and devices. There is no technology and basic amenities of living. These peoples are not even familiar with basic needs of a human to have education and there is high illiteracy rate there to make them walk in hand with the world they need a bridge of information that can connect them to the world.

In a youtube Interview, Andreas had answered all the Investors and guest questions related to Cajutel [ICO](#) on an online chat and cleared the vision and future potential profitability of the company.

Internet availability has part of potential in advancing reasonable and fair improvement. It will increase Possibilities of using the Internet in a way that will benefit society at large and vulnerable groups in particular. We must understand the actual needs and existing facilities in rural communities. There can be a major change during the time spent social change viewpoints to be considered, including the issues of the present day versus conventional open practices.

The Internet can just turn into a device for social improvement in the event that it is connected in a way that tends to the intricate difficulties of enhancing the lives of the minimum advantaged and most-

destitute millions around the globe. Social advancement here means in change in the expectations for everyday comforts and general prosperity of all individuals from any given society.

Likewise, if the Internet is to be socially helpful, it should be utilized for mitigating neediness, enhancing access to medicinal services and instruction, saving and decently disseminating assets, and fortifying investment in basic leadership forms. Accordingly, the accomplishment of the Internet ought to be measured less as far as sheer quantities of associated people and more as far as availability and commitment to social advance.
