

Effective Treatment Protocols for Difficult Neuropathic Pain to be Delivered in Richmond Virginia Seminar

The 8-hour hands-on program will teach healthcare participants how to effectively use laser therapy for neurogenic chronic pain challenges

RICHMOND, VA, UNITED STATES, October 10, 2017 /EINPresswire.com/ -- Internationally-recognized laser expert, [Dr. Nelson Marquina](#), PhD, DC will lead the seminar “Laser Therapy for Neuropathic Pain and Pain Syndromes” at the [USA Laser Biotech](#) training center in Richmond.

As a developer of photonic and bioelectromagnetic systems and treatment protocols, Dr. Marquina will unlock laser therapy healing protocols for such mysteries as post-herpetic neuralgia, diabetic neuropathy, CRPS, post-stroke and amputee pain, certain cancer drug side effects and other paradoxical pain syndromes. Participants will learn to distinguish between peripheral and centrally-facilitated pain and how to treat each.

Hands-on Learning

“

I left with tons information I can use in clinical practice. I believe your course should be a requirement before purchasing a laser; that way we buy the correct laser and understand how to use it.”

Dr. Travis Stickle

Therapeutic lasers are often overlooked as a viable option for neuralgia. This seminar will address how properly-powered lasers can repair and regenerate nerves and other tissues on a cellular level to reduce painful signals being transmitted due to nerve degeneration or damage. Many of these signals express as sensations of numbness, pins and needles, stabbing, burning and throbbing.

Dr. Marquina has an engaging teaching style that is both enjoyable and effective. Dr. Travis Stickle says of a recent USA Laser seminar, “I left with tons of information I can use in

clinical practice. I believe your course should be a requirement before purchasing a laser; that way we'd buy the correct laser and understand how to use it.”

Dr. Marquina also instructs the only university-certified “Laser Practitioner Certification” program in the US, which he will be introducing to an international audience in Tokyo, Japan in November.

The neuropathic pain seminar will be held on Saturday, October 28, with CEUs available to qualified professionals.
