## About Flexitanks

Flexitank is a bag used to transport non-hazardous and non-viscous (less than 1.6 specific gravity) bulk liquid cargos through ordinary 20 ft containers. Flexitanks are made up of a single layer or multilayer polyethylene or polyvinyl chloride. They can hold around 11,000-25,000 liters of liquid substances, such as industrial oils, food stuffs, and non-hazardous chemical liquids. The container that carries the filled flexitanks should have a gross weight of around 28-32 metric ton and age of five years or below. The loading and unloading of flexitanks take place with the help of a pump and usually take 15-30 minutes depending on the size of the cargo and the pump. All flexitanks should be filled more than 96% of their capacity to avoid the risks caused by the hydraulic surging of liquid substances.

Technavio's analysts forecast the global flexitanks market to grow at a CAGR of 15.63% during the period 2017-2021.
