About Active Protection System (APS)

Active protection systems (APS) is a technology that integrates radars, sensors, fire control technology, and interceptors to detect, target, and negate incoming enemy fire. For decades, armored tanks and combat vehicles were the only sources of protection for the crew and vehicle against shells, rockets, and anti-tank guided missiles (ATGM). However, with the rising developments in the field of anti-tank weapons, the need to develop systems that can actively detect, identify, track, and shoot down these missiles has led to the development of active protection systems (APS).

Technavio's analysts forecast the global active protection system (APS) market to grow at a CAGR of 6.29% during the period 2017-2021.
