

Australian Tech Company Raises \$700,000 During ICO and Commences Full Project Development

ClearPoll, a social public opinion poll network using blockchain technology, has been fully funded after reaching the hard cap in their ICO this week.

PERTH, WESTERN AUSTRALIA, AUSTRALIA, October 23, 2017 /EINPresswire.com/ -- Over \$700,000 USD was raised, and the ICO sold out nearly a week before the scheduled end date.

The game changing social app is designed to give every user a powerful voice on the big questions, in the form of voting on a poll and being able to easily share and analyse the results.

ClearPoll - Social public opinion polls on the blockchain

Blockchain technology is used to decentralise the poll results, meaning no company or individual can ever change the votes or the results, or censor any unfavourable polls. The cutting edge technology is certain to be used for future election voting, however ClearPoll has focused on the social aspect and offers very accurate, high volume public opinion data.

"We believe the current methods of collecting and publishing accurate public opinion poll data are flawed. The media and other organisations are clearly manipulating or censoring and results that do not support their narrative. ClearPoll solves that problem by decentralising the data and making it 100% viewable at all times, to all users." commented ClearPoll Director <u>Daniel Abela.</u>

ClearPoll is now in full development and have released <u>evidence of a working prototype</u>. The full product is due to launch in July 2018 and is set to change the way we record and view public opinion across a wide variety of topics.

Investors are lining up to purchase ClearPoll's POLL tokens at cryptocurrency exchanges, with the belief that a substantial increase in their value is highly likely due to low circulation and obvious high demand.
