## [Electronic Security Market 2017](#)

Physical security refers to security measures that help to monitor and control access of an entity to premises, or equipment, or resources. These measures protect individuals and property from theft or attacks. Physical security involves the use of multiple layers of security products, such as surveillance systems, locks, and access control systems. It is mainly divided into two: electronic physical security and mechanical physical security. Electronic physical security is a system that is developed by integrating numerous entities as per end-users' requirements. This security system is a combination of various security equipment or solutions.

The analysts forecast the global electronic security market to grow at a CAGR of 14.4% during the period 2016-2020.
