About IT in Czech Republic

The current state of the IT market in Czech Republic and its single digit growth rate is attributed to the adoption of cloud computing technologies by enterprises. Enterprises are gradually shifting from the CAPEX to the OPEX model to curb high capital costs associated with purchase and installation of hardware, which has affected the IT hardware market in Czech Republic. Also, the country does not exhibit very high IT activity in terms of IT projects.

In addition, incentives for investing in sectors such as manufacturing, information technology, software, and R&D are likely to improve several key markets in Czech Republic. The incentives include tax rebates, tax breaks, employment grants, and 10-year tax relief schemes.

Technavio's analysts forecast the IT market in Czech Republic to grow at a CAGR of 4.40% over the period 2014-2019.
