China Neonicotinoid Insecticides Market Research Report

With the exiting of high-toxicity pesticides, neonicotinoid insecticides have been developing fast. They have replaced organophosphate insecticides to be the largest insecticide category by market value globally since 2010, whose market value accounts for about 25% of the global insecticides total. The rate has been increasing in recent years. In 2014, the global neonicotinoid insecticides market value reached USD3.9 billion, up by 7.1% compared with that in 2013.

For the domestic application, as two old neonicotinoid insecticides products, imidacloprid and acetamiprid are widely used in many crops, whose total consumption volume was about 25,000-30,000 tonnes (calculated by formulation) in 2012-2014. Thanks to their good control effect and the continuous market promotion, the consumption of other neonicotinoid insecticides products have been growing year by year.
