PUNE, INDIA, October 27, 2017 /EINPresswire.com/ -- [Advanced Distribution Management System Market Analysis And Forecast](#)

## About Advanced Distribution Management System

An advanced distribution management system is a combination of DMS, SCADA, and OMS along with the control room applications on a single, secure platform having a single user interface. This system basically works in combination with the GIS, the utility's CIS, and IVR system. The system is specifically designed to reduce the financial impact of a power blackout. With the help of this system, power utilities are able to monitor and control the distribution network, thereby enhancing the quality of their services. It also helps in providing a real-time analysis of the operational condition of a power network and provides self-healing capabilities. Ultimately, the advanced distribution management system helps in the proper management of increasing energy consumption, surging energy cost, and power system network instability due to aging.

Technavio's analysts forecast the global advanced distribution management system market to grow at a CAGR of 17.1% over the period 2014-2019.
