[Holter Monitors Market 2017](#)

A Holter monitor is a battery-operated device that measures and records the heart's activity constantly for 48-72 hours. The device contains electrodes that are attached to the skin. With the help of these electrodes, the ECG is measured constantly. The Holter monitor is used to monitor patients with slow, fast, or irregular heartbeat. It helps a doctor in deciding whether the patient requires a pacemaker or a cardiovascular procedure to restore regular heart rhythm. The monitor can help the doctors to check if the medicines are working and if the heart is getting enough oxygen to meet its needs. It can also help doctors determine the reason for a patient's dizziness or the feeling of the heart racing or skipping a beat.

The analysts forecast the global Holter monitors market to grow at a CAGR of 5.10% during the period 2017-2021.
