## [Card Printer Market 2017](#)

A card printer is an electronic printing device that is mostly used as a desktop printer. The primary use of the card printer is to print and personalize plastic cards. Card printers are mostly designed with laminating, striping, and punching functions and use a desktop or web-based software. The basic difference between a conventional printer and a card printer is by the external features. The plastic cards are generally made of the PVC and plastic which need punching and laminating. Depending on the thickness and the dimensions of the plastic cards, a variety of card printers are used. The cards have a high-resolution design printed on them along with a barcode, magnetic stripe, numbering, signature panel, embossing, scratch-off panels, and many other options or effects.

The analysts forecast the global card printer market to grow at a CAGR of 2.45% during the period 2017-2021.
