

# TEC Certifies Kenandy Cloud ERP Product

*Software analysis firm certifies Kenandy platform for its scalability and advanced capabilities*

REDWOOD CITY, CALIFORNIA, USA, November 1, 2017 /EINPresswire.com/ -- Kenandy, a cloud enterprise resource planning (ERP) solution built natively on the Salesforce platform, has received certification by Technology Evaluation Center ([TEC](#)), a leading impartial advisory firm serving the enterprise software market. TEC certified Kenandy's [Cloud ERP](#) solution this month and produced a comprehensive report on the product, which is now available on TEC's certified ERP solutions list.

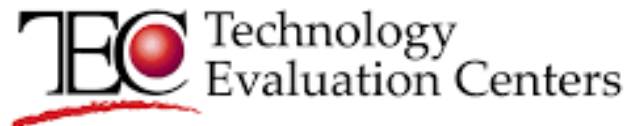

The TEC certification is designed for small-size manufacturing and distribution companies, yet TEC found the Kenandy platform can easily scale to support medium and large-size organizations, as well. The TEC certification process was extensive and involved close and detailed inspection of Kenandy and the latest release of the platform.

"Kenandy has built a highly advanced cloud ERP platform that can successfully support both medium and large-size organizations," says Ted Rhom, Senior ERP Analyst at TEC. "The analysis we conduct for these types of certifications is extensive, but we believe our neutral approach gives our customers the information they need to make decisions on the best software solutions for their needs."

TEC is an impartial software analysis firm. The company does not represent, resell, or implement specific software solutions. TEC's mission is to help organizations of all sizes identify the particular business software solutions that are best aligned to their individual requirements.

During the Kenandy product assessment, TEC was impressed with the overall scalability and performance of the platform, as well as the number of advanced capabilities found within the Kenandy solution, including an integrated product configurator, management for complex bill of materials (BOMs) and routings, and a lightning fast, game-changing manufacturing requirements planning (MRP) tool.

"Our customers clearly see and understand the value Kenandy Cloud ERP brings to their business,"

says Chuck Berger, CEO, Kenandy. "But it's always important to get objective analysis from respected and neutral industry experts, such as TEC, who are exposed to hundreds of enterprise platforms in a given year. Kenandy is proud of the TEC certification, and we look forward to continuing to innovate on our platform in the future."

Unlike rigid and inflexible legacy ERP software, the Kenandy Cloud ERP platform empowers business innovation by allowing customers to map their ERP to their business processes instead of the other way around. Kenandy has a Business Objects-based architecture unlike competing platforms, which are built on thousands of tables of modules. Kenandy's unrivaled architecture creates a flexible, user-friendly experience and helps businesses innovate on the fly while increasing the overall pace of their business.
