

# Travelmate Robots: Technology that integrates with the Patient and Doctor

SAN FRANCISCO, CALIFORNIA, UNITED STATES, November 3, 2017

[EINPresswire.com/](http://EINPresswire.com/) -- We are faced with a technological revolution on a scale that has never been seen before. Right now, the first ever consumer robot is being released – it's called [Travelmate](#) and it has thousands of features. In general, technology is progressing at a breakneck pace. Medicine is progressing at an even faster pace and fittingly, Travelmate Robotics is emerging as a key innovator of technology that integrates into the medical field. Specifically using technology to interact between the doctor and the patient at any time.

Travelmate Robotics has created a medical assistant robot that will help make your everyday life easier, simpler and healthier. It'll be able to monitor your vital signs and any changes to the status of your health. If it senses that something is abnormal, it'll alert you. It can even alert your doctor so that he/she can immediately know what's going on.

This will mean that in the very near future, you'll have access to a robot nurse that will be available 24/7 to make sure that you are alright and healthy.

Doctors will be able to purchase a medical Travelmate for use in their office and to give to their patients. The use of optical, infrared, ultrasound, and other sensors enables the robot to determine your temperature, heart rate, and blood pressure. The ability to add a gas analysis system to the device allows it to take samples of the owner's breath, make a preliminary analysis, and forward all the data it has gathered to the owner's doctor via a mobile app.

For doctors, this is immeasurably handy because it can be used as a fully fledged medical assistant. It is a necessary expense for any doctor office, and the Travelmate team expects that it will be adopted quickly in the doctor community.

Innovation drives us forward and everyone should take a part in it. If you want to be at the forefront of the technological revolution that is happening everyday, then you should look into ordering a Travelmate. It's a robot that moves your things for you, but it has thousands of other features that make it a fully fledged robot.

Using Travelmate as a medical assistant is just one of many different things that it can be used for. It's an immeasurably useful tool for doctors too and you can order one right now: [travelmaterobotics.com](http://travelmaterobotics.com)
