According to American Heart Association, in 2017, cardiovascular disorder is the major cause of all global deaths, around 92.1 million American people are diagnosed with some form of cardiovascular disease thereby, increasing the demand for cardiovascular implants such as pacemaker. Pacemakers are used to treat arrhythmias. Arrhythmias are associated with the rate or rhythm of the heartbeat. However, it is essential to keep the device in a sterile packaging so that there would be no chances of contamination or any physical damage. Sterile packaging plays a vital role in terms of transportation and storage of the devices to reduce the risk of any microbes. Therefore, validating the packaging process is essential to assure that the critical parameters and sealing process used at the packaging meet the required demands.

Browse 45 Market Data Tables and 48 Figures spread through 180 Pages and in-depth TOC on medical implants sterile packaging market, by product type (clamshells, pouches and bags, blisters, tubes, vials and others), by application (spinal implants, reconstructive joint implants, extremity braces and support, dental implants, cardiovascular implants and others), by material type (plastic, paper, foils and others) and by region (North America, Latin America, Europe, Asia Pacific, Middle East, and Africa) - Global Forecast to 2025

Thermoform Engineered Quality has developed a new solution TEQpropylene, intended to reduce sterile packaging costs and environmental impacts. TEQpropylene offers strength, sustainability, and clarity improvements to achieve total package cost savings. Moreover, pouches made by Tyvek are used by medical device manufacturers for packaging various

sterilized medical devices particularly with low profile and light weight. Sterilization pouches made by Tyvek are used in healthcare settings and hospitals such as outpatient surgical centers and in house sterilization of surgical instruments. The advantages of Tyvek pouches are to provide resistance to microbial penetration, which is expected to maintain sterility of contents in pouches until opened. Another advantage of using Tyvek pouches for medical devices and sterilization is its superior puncture resistance and tear strength as compared to medical-grade papers.
