

Cardiac Direct expands their CardioTech product line; introducing the GT-20 ultra-portable patient monitor

The GT-20 adds to the modular series of patient monitors

VENTURA, CALIFORNIA, UNITED STATES, November 3, 2017 /EINPresswire.com/ -- CardiacDirect is a leading provider of high quality, cost conscious diagnostic equipment, shipping globally since 2007. In 2012 Cardiac Direct introduced their own private label brand CardioTech. Since the CardioTech launch, the brand has grown into a well-known name and now offers over 50 products across multiple product categories.

The newest product to the CardioTech family is the GT-20. The GT-20 shrinks down the traditional footprint of a patient monitor to give you the ability to use it anywhere, anytime. The GT-20 comes configured with EKG, RESP, NIBP, SpO2 and temp as standard parameters and features optional Respironics LoFlo Sidestream Etco2, 12 Channel EKG and 2 channel invasive blood pressure (IBP). The unit features internal wifi and internal memory for advanced EMR connectivity via HL7 and/or connection to the CardioTech Central Monitoring Station (CMS).

The GT-20 can be used as a standalone monitor during office procedures making it perfect for mobile practitioners, conscious sedation, dental and surgery center environment. It can also be used in combination with a CardioTech Elite series modular patient monitor which allows seamless monitoring as a patient moves from different departments within a facility or in a transport environment. In this scenario, GT-20 plugs directly into the back of the elite series monitor to act as the brain of the unit, passing the patient data to the modular monitor allowing easy moves in and out of higher acuity settings. It is designed to be rugged and thrives in rescue site and ambulance transportation scenarios, meeting requirements for practicality, convenience, and transportation of patients during emergency treatment.

Weighing less than 4lbs, the CardioTech GT-20 is one of smallest patient monitors you will find in the market. It comes complete with an IP44 waterproof rating, 3 inch touchscreen, long battery life, built in memory, and incredible shock resistance. As a result, the GT-20 is suitable for patient transport in the harshest environments. Setting the bar in excellent power saving performance, CardioTech's GT-

20 requires no fan for heat dispersing, while the battery life is extended for long term use and transport.

CardioTech's GT-20 is available immediately through the Cardiac Direct website (www.cardiacdirect.com) or by calling Cardiac Direct at (888) 354-2968.
