

Bouquet Announces AI-Chabot: Aristotle

software that turns data analytics into meaningful conversations

SAN FRANCISCO, CA, USA, November 6, 2017 /EINPresswire.com/ -- Silicon Valley tech startup, [Bouquet](#), announces their official AI-chatbot, named Aristotle, as of November 2017. Aristotle creates a whole new way to experience data and acts as a virtual assistant at the palms of your hands.

“Chatbots enable conversations,” says Adrien Schmidt, co-founder and CEO. “Conversations are already the way business executives exchange with business intelligence analysts. With Aristotle, companies can scale their analytics team and fulfill the dream of having one personal analyst to support the work of each individual.”

“Our business is growing like crazy and we needed faster, easier access to data to support our users, optimize our marketing and orientate our sales,” says Gene Linetsky, CTO of San Francisco-based RealtyShares. “We are looking for Aristotle to become our AI analyst, to scale our need for data to be accessible to nontechnical business users.”

“

Aristotle is the first AI analyst on the market. A dialog with Aristotle in natural language leads to uncovering insights in the most pleasant and efficient way possible.”

Marios Anapliotis

“We’re at the beginning of something huge!” says co-founder and COO Marios Anapliotis. “Aristotle is the first AI analyst on the market. A dialog with Aristotle in natural language leads to uncovering insights in the most pleasant and efficient way possible. The conversational interface is truly designed for

everyone,” says Anapliotis.

Aristotle ...

-will change how enterprises receive and understand information by providing new interfaces powered by conversations

-is always on, delivering smart and flexible analytics through conversations on mobile devices using standard messaging tools and voice-activated interfaces

-dramatically reduces the time to data for all business users, thereby accelerating the pace of business.

-streamlines the way analysts use their time, preparing companies for the growing data needs of the near future.

The name Aristotle pays homage to the great Greek philosopher Aristotle and the dialogues and teachings that he transpired with his peers and to his pupil Alexander the Great. His quote, “We do not act rightly because we have virtue or excellence, but we rather have those because we have acted rightly.” grounds both Schmidt and Anapliotis to strive to advance and inform the AI community with their own Aristotle.
