

ThirdEye Gen releases X1 Augmented Reality Smart Glasses™ with Enterprise AR Apps

PRINCETON, NJ, UNITED STATES, November 6, 2017 /EINPresswire.com/ -- ThirdEye's X1 Smart Glasses™ have received interest & pre-orders from Enterprises, Educational Institutions, Sports Media & Law Enforcement. The X1 pushes the boundaries of Augmented Reality hardware. Packed with the latest sensors, chips and a powerful optics design that allows users to experience a HD display that is the equivalent to a 90"screen at 10 feet, the X1 is a fully integrated product and its sleek form factor & UI allow the user to easily wear it while completing tasks.

X1 AR Smart Glasses

ThirdEye's AR Software provides a full Enterprise Augmented Reality platform that includes live audio, video, P.O.V AR data communication between remote users- a "See What I See" application. This app is hands-free – the user controls via their head-motion which is based on ThirdEye's proprietary software and provides an intuitive AR interface that allows on-site personnel to collaborate with remotely located experts. Its 3-Screen interface allows the remote user to have a clear Field of View while rotating between AR screens via head-motion. A secure cloud based architecture enables the entire session to be archived for later reference. This app directly contributes to improved first time repair rates and to more cost-effective operations. The software is modular based on the end-user's needs- Law Enforcement inputs real-time image recognition capabilities while Enterprises & Universities stream a remote user's live Point of View with annotations.

ThirdEye has already entered into partnerships with Universities & Sports and Entertainment companies to develop other custom, fully integrated Augmented Reality solutions. These institutions are excited to utilize Augmented Reality- ThirdEye's ability to develop a full hardware and software solution will allow students to easily use AR to change the way they learn, to experience Augmented Reality overlays everyday on campus and to help develop applications for the X1. ThirdEye is also in partnership to use AR applications on the X1 to augment the sports and entertainment experiences to augment viewing with live, first person Point of View..

The ThirdEye App Store lets developers submit their Augmented Reality & Virtual Reality applications. Developers can submit either a Free app or a Paid app and receive a percentage of every Paid app download. The X1 Smart Glasses run on Android- creating a platform for the worldwide community of AR/VR developers.

"The ThirdEye App Store will help spur Augmented Reality App development," says Nick Cherukuri, Founder of ThirdEye. "With our X1 Smart Glasses we wanted to create a platform that benefited the developers creating the best AR/VR applications."
