## About Automotive Active Grille Shutter

Active grille shutters use an automatic open and shut technology to reduce the drag in vehicles, which results in higher fuel efficiency and lower emissions. The grille shutter vents are automatically closed when excess air is not required by the engine, which provides a great highway performance. In colder climatic conditions, the grille is kept shut to maintain an optimal engine temperature. The automotive active grille shutter is currently in the introduction stage and is limited to mid-segment passenger cars, luxury segment passenger cars, and pickup trucks in some regions.

Technavio's analysts forecast the global automotive active grille shutter market to grow at a CAGR of 2.03% during the period 2017-2021.
