According to the report, the Global 3D Printing Market is estimated at \$3.47 billion in 2015 and is expected to reach

3D Printing - Global Market Outlook (2016-2022)

REPORT SELLERS

\$12.53 billion by 2022 growing at a CAGR of 20.1% from 2015 to 2022.

The factors driving the market include high degree of precision, ability to build customized products, and competency over traditional technique. However, higher production cost, expensive 3D printing software, shortage of skilled labor and inability to manufacture massive outputs are inhibiting the market growth. Moreover, application of 3D printing in different industries and manufacturing process are creating opportunities for the market. The economies of scale gained due to advancement in technology and enhanced manufacturing process will boost the market in future.
