Demand response management system is an IT solution that helps balance power supply and demand. Load and weather conditions are forecast and loaded into the software, which then calculates and manages production, and loads profiles into the database for future use. With the help of DRMS, end-users can modify their power usage pattern based on the supply of power.

Technavio's analysts forecast the demand response management system market in Latin America to grow at a CAGR of 36.46% over the period 2014-2019.
