About Searchlights

A searchlight is a device that usually combines an immensely luminous light source with a mirrored parabolic reflector to project a high intensity beam of light in a specific direction. Searchlights always include the means for changing the direction of a light beam. Searchlights have vast applications in industries such as marine, defense and security, as well as architectural and extravaganza. Searchlights are powered by different light sources such as halogen, Xenon, and LED. Xenon is likely to have the maximum light beam range.

Technavio's analysts forecast the global searchlights market to grow at a CAGR of 4.54% during the period 2017-2021.
